COMPLEX LUMINAIRE

SIGGRAPH 2021

→ • COMPLEX LUMINAIRE

our method 64spp

path tracing 1024spp

Area light
path tracing 64spp

Point light
path tracing 64spp

Complex luminaire
our method 64spp

- *Difficult to render*
- *Large storage*
- *Copyright protection*

Complex geometries
Complex light transport

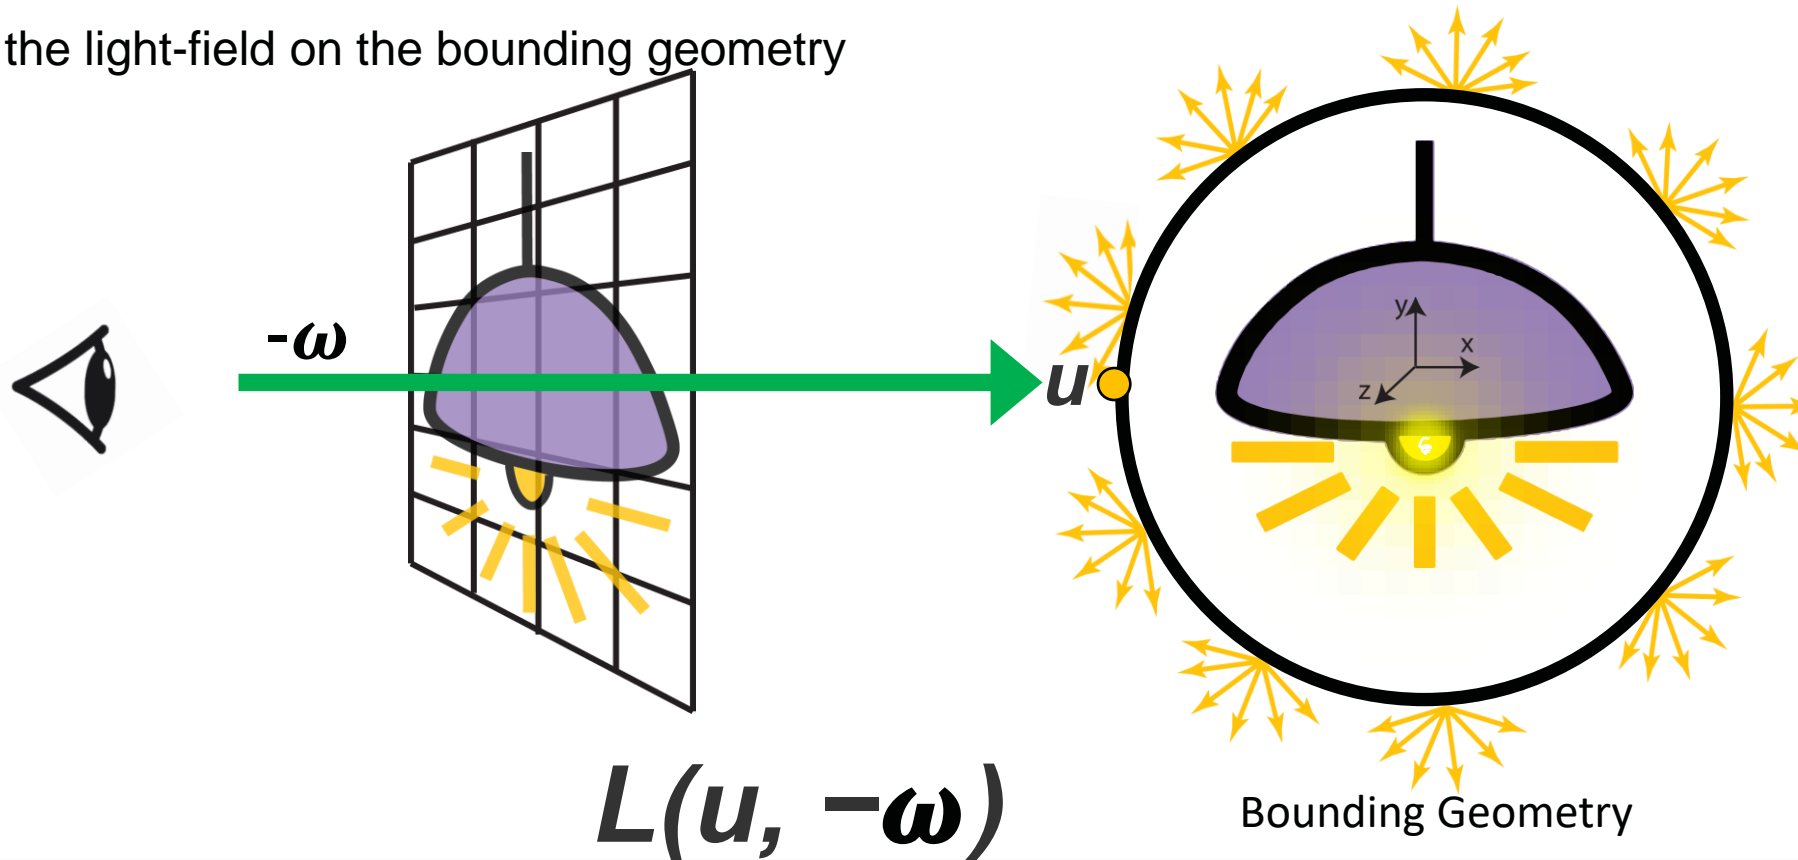

Complex geometries
Complex light transport

Light-field (direction and position) simplify the complex light transport and geometry

Record the light-field on the bounding geometry

Record 4D position-direction information

[Chang et al. 2006]

$256*256*256*256= 16\text{GB}$ in float

[Heidrich et al. 1998]
Canned light
implemented by Velázquez

Low resolution
Large storage

Nerf = Ray Marching + MLP

[Mildenhall et. al. 2020]

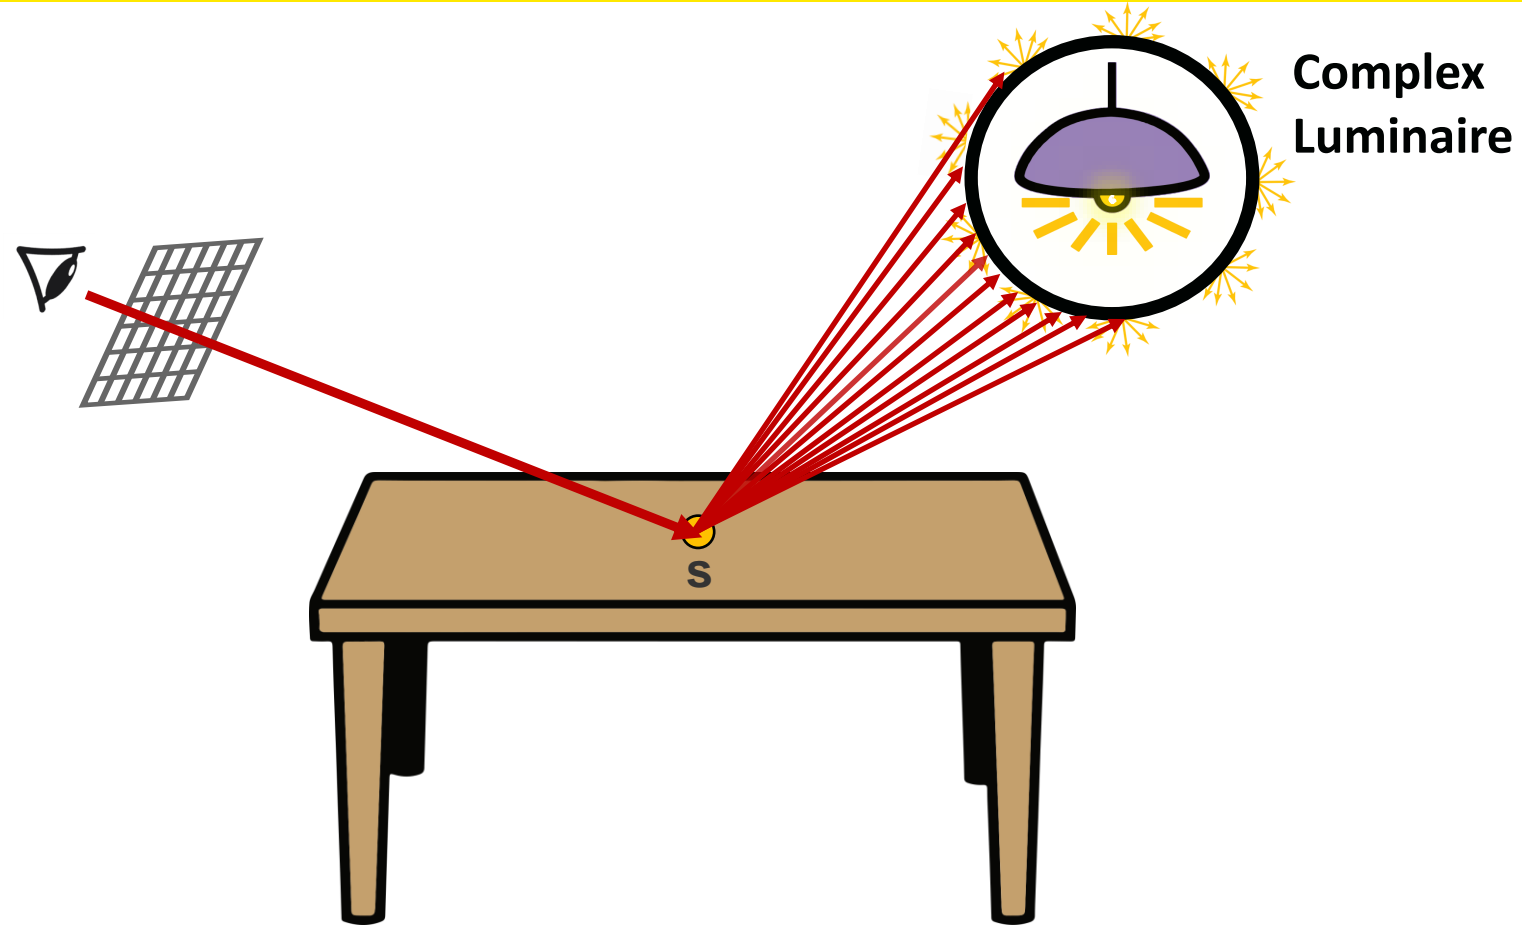

NEURAL COMPLEX LUMINAIRE (OURS) EVALUATION

Complex geometries ✓
Complex light transport ✓

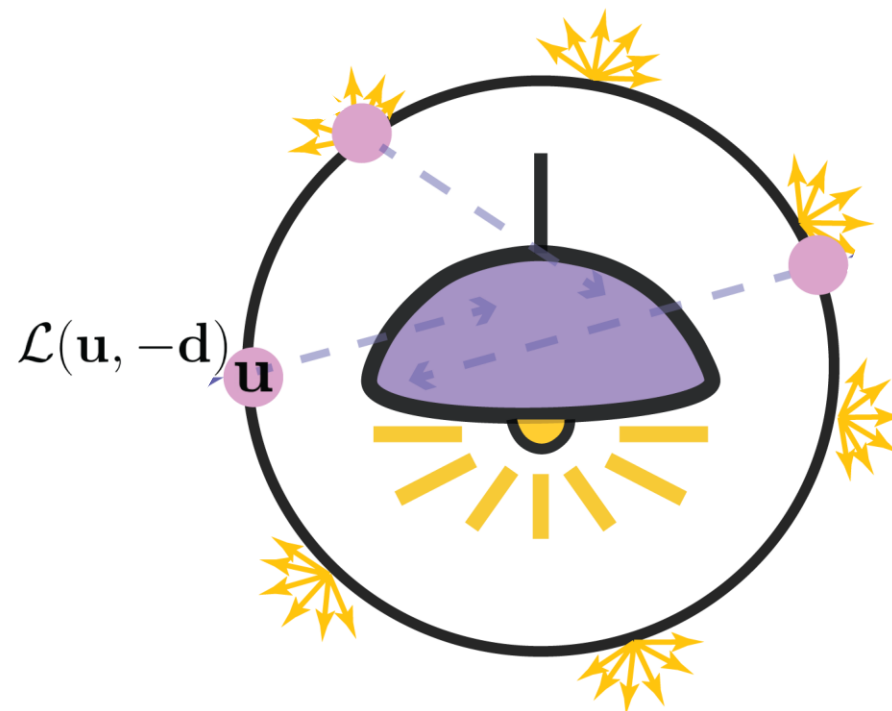

NEURAL COMPLEX LUMINAIRE (OURS) SAMPLING

Importance sampling

Uniform sample: not efficient

Importance sample at each shading point

Importance sampling
network

NEURAL COMPLEX LUMINAIRE (OURS) SAMPLING

Importance sampling ✓

NEURAL COMPLEX LUMINAIRE (OURS) BLENDING

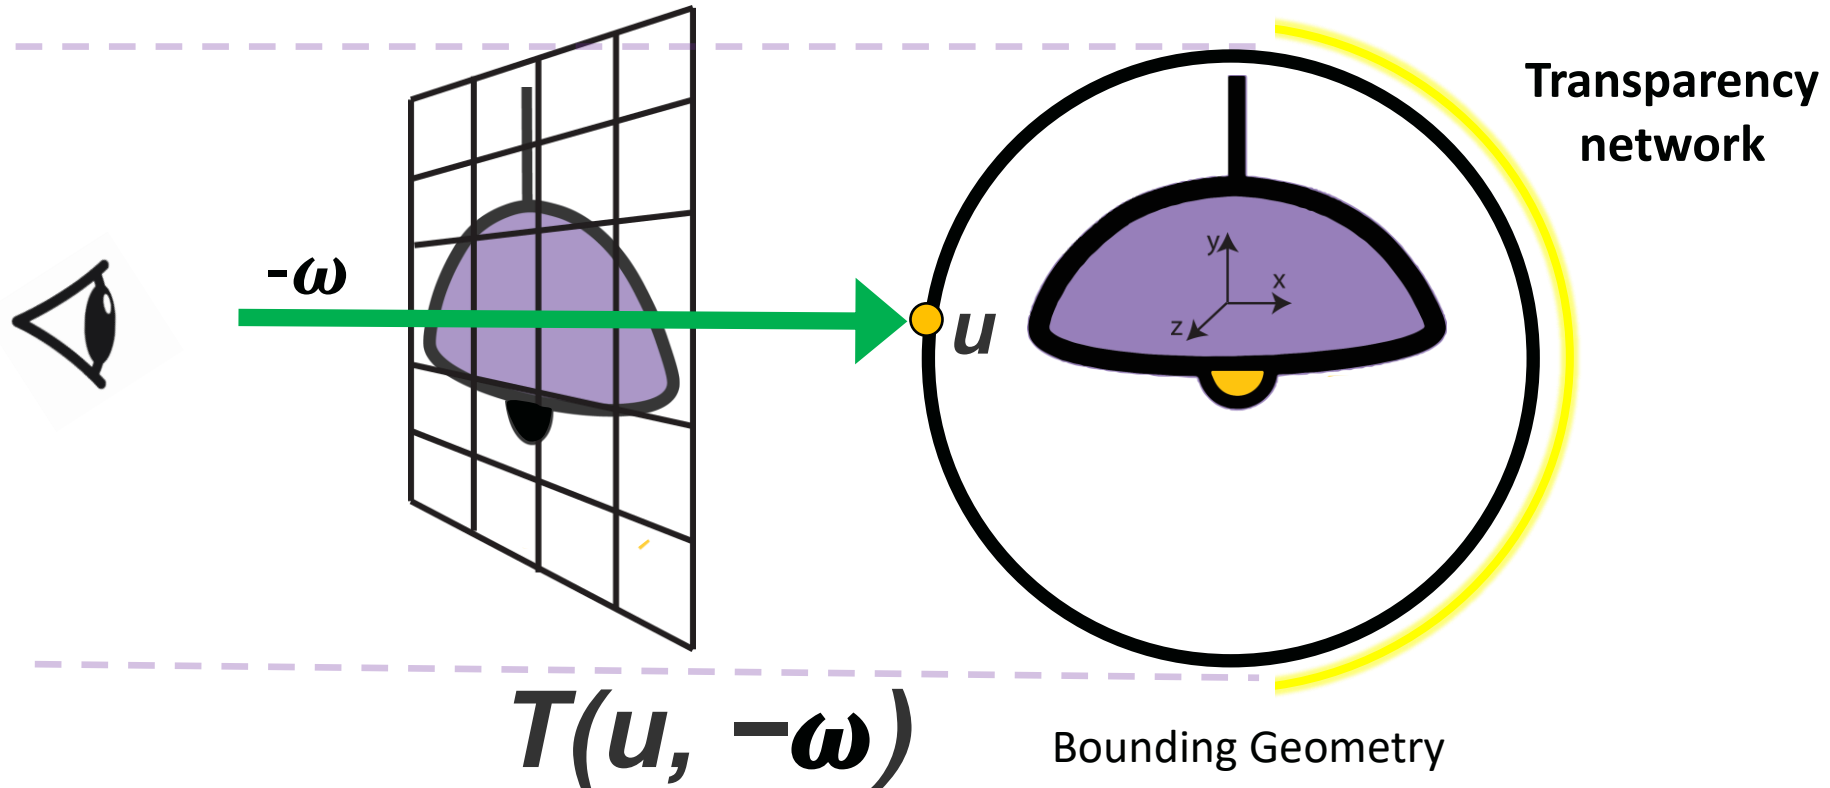

Blend the luminaire and background

Transparency field

Same structure as the evaluation network

NEURAL COMPLEX LUMINAIRE (OURS) BLENDING

Blend the luminaire and background ✓

A neural method which represent complex luminaires as “black boxes”

- *Evaluation*
- *Sample & pdf*
- *Blending*

→ ANISOTROPIC POINT LIGHTS

- **Two-pass rendering**
Illumination Appearance
Separately

Large storage
Can't support MIS
Original geometry

Precompute

APLs

Rendering

Final

- **A compact representation**
- **Standard rendering system integration**
- **Efficient and accurate rendering**
- **No real geometry**

→ COMPARISON TO PREVIOUS WORKS

Method	Importance Sampling	Storage	Original geometry	Speed
Light field	No	Very Large	No	Slow
Nerf	No	Small	No	Slow
APL	No	Large	Yes	Fast
Ours	Yes	Small	No	Very Fast

+

Complex luminaire

Eval()

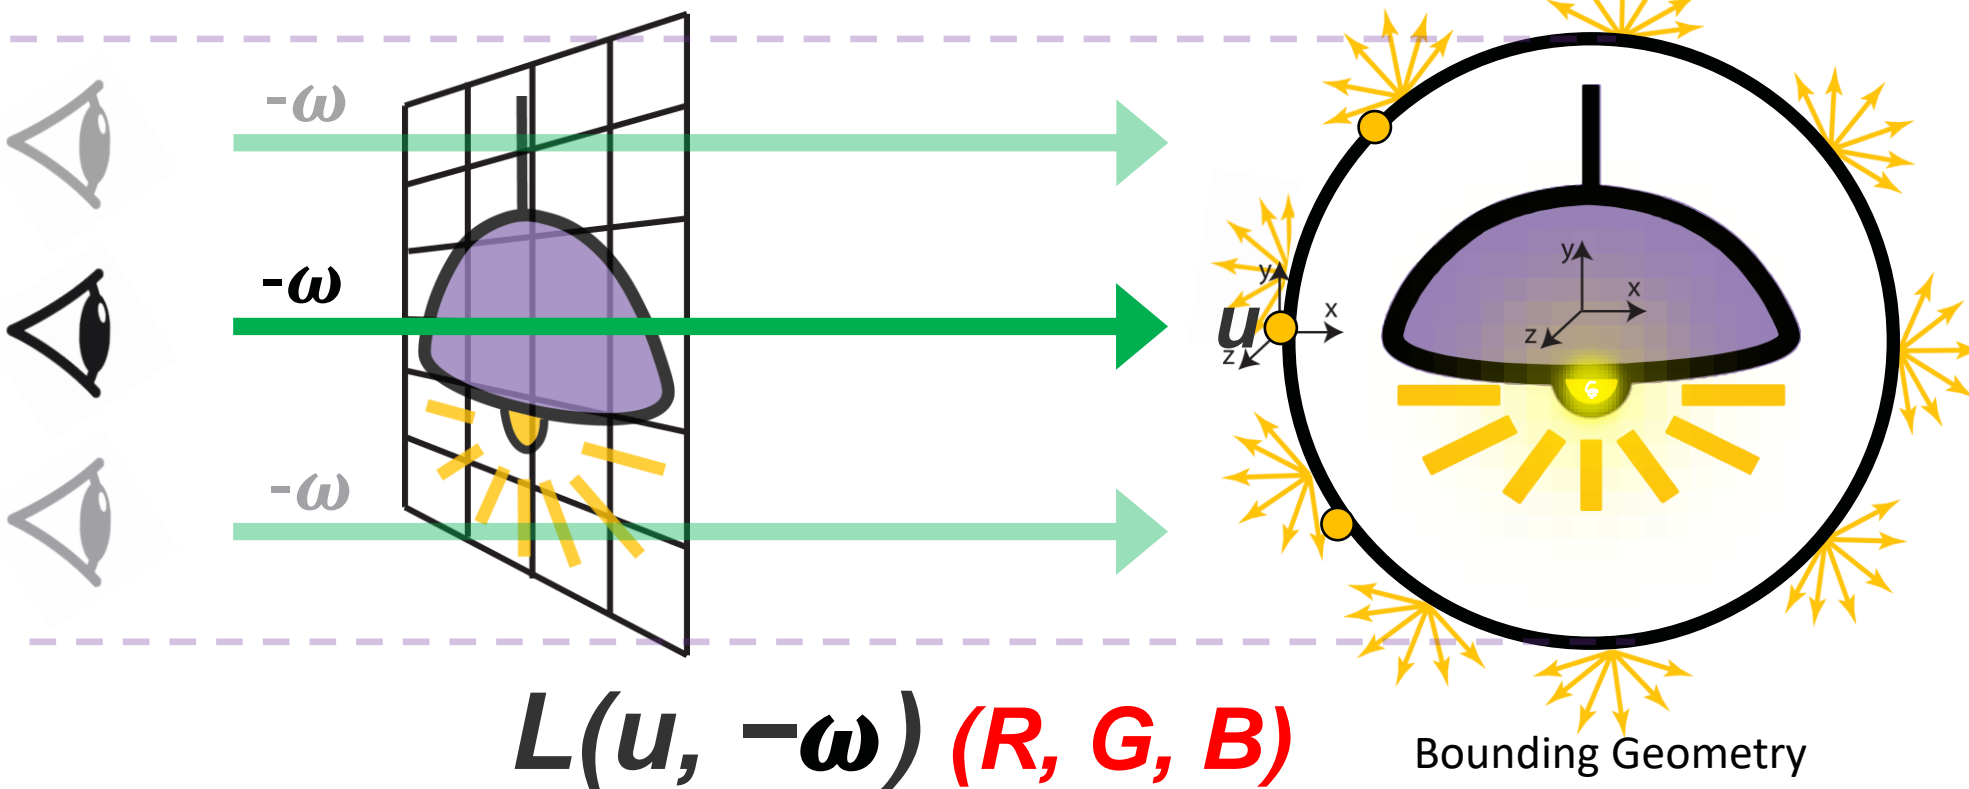

Sample() & Pdf()

Alpha()

Evaluation network

How to importance sample light?

*The shape of light we see?
Sample and pdf?*

→ IMPORTANCE SAMPLING

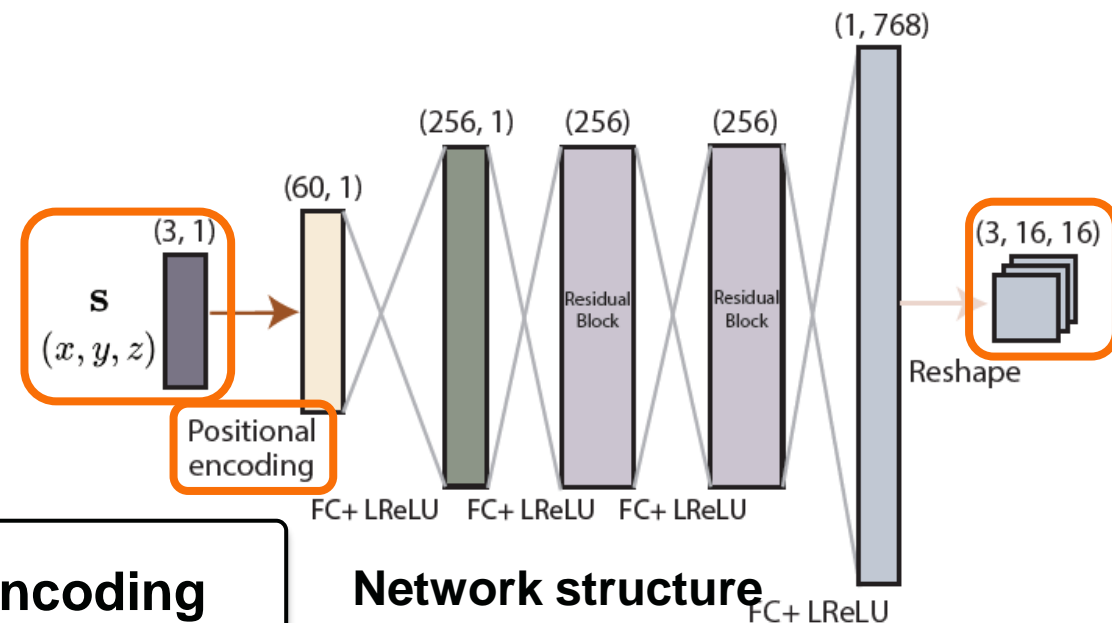

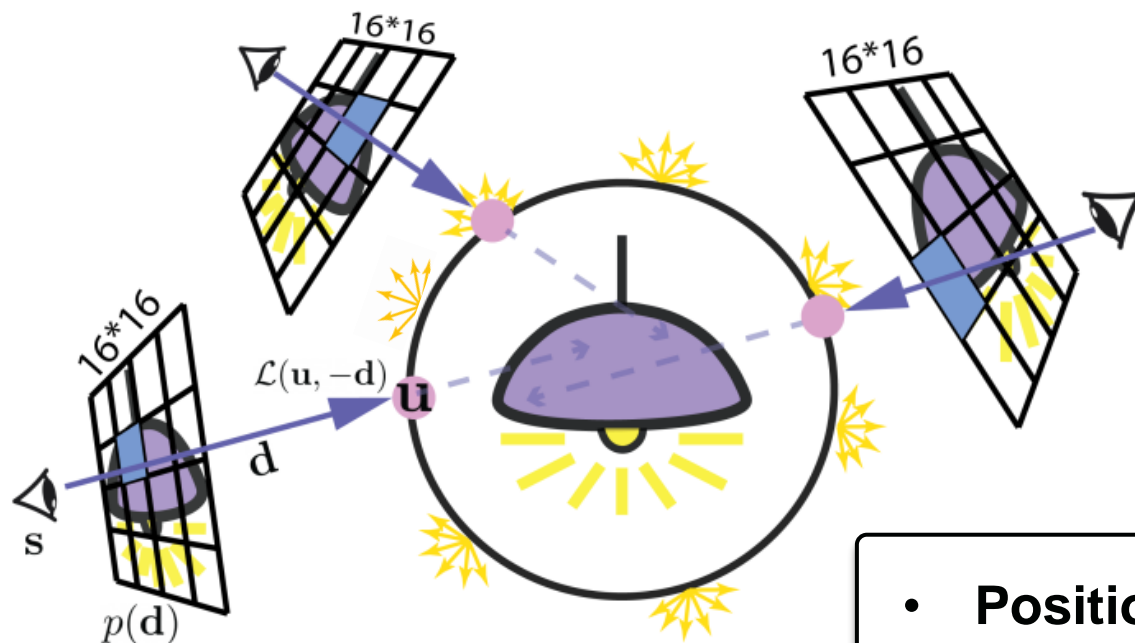

$$16*16*L(u, d) \quad 16*16* (R, G, B)$$

$$pdf \propto L(u, d)$$

$$\text{Sampling weight} = L(u, d) / pdf(d)$$

→ IMPORTANCE SAMPLING NETWORK

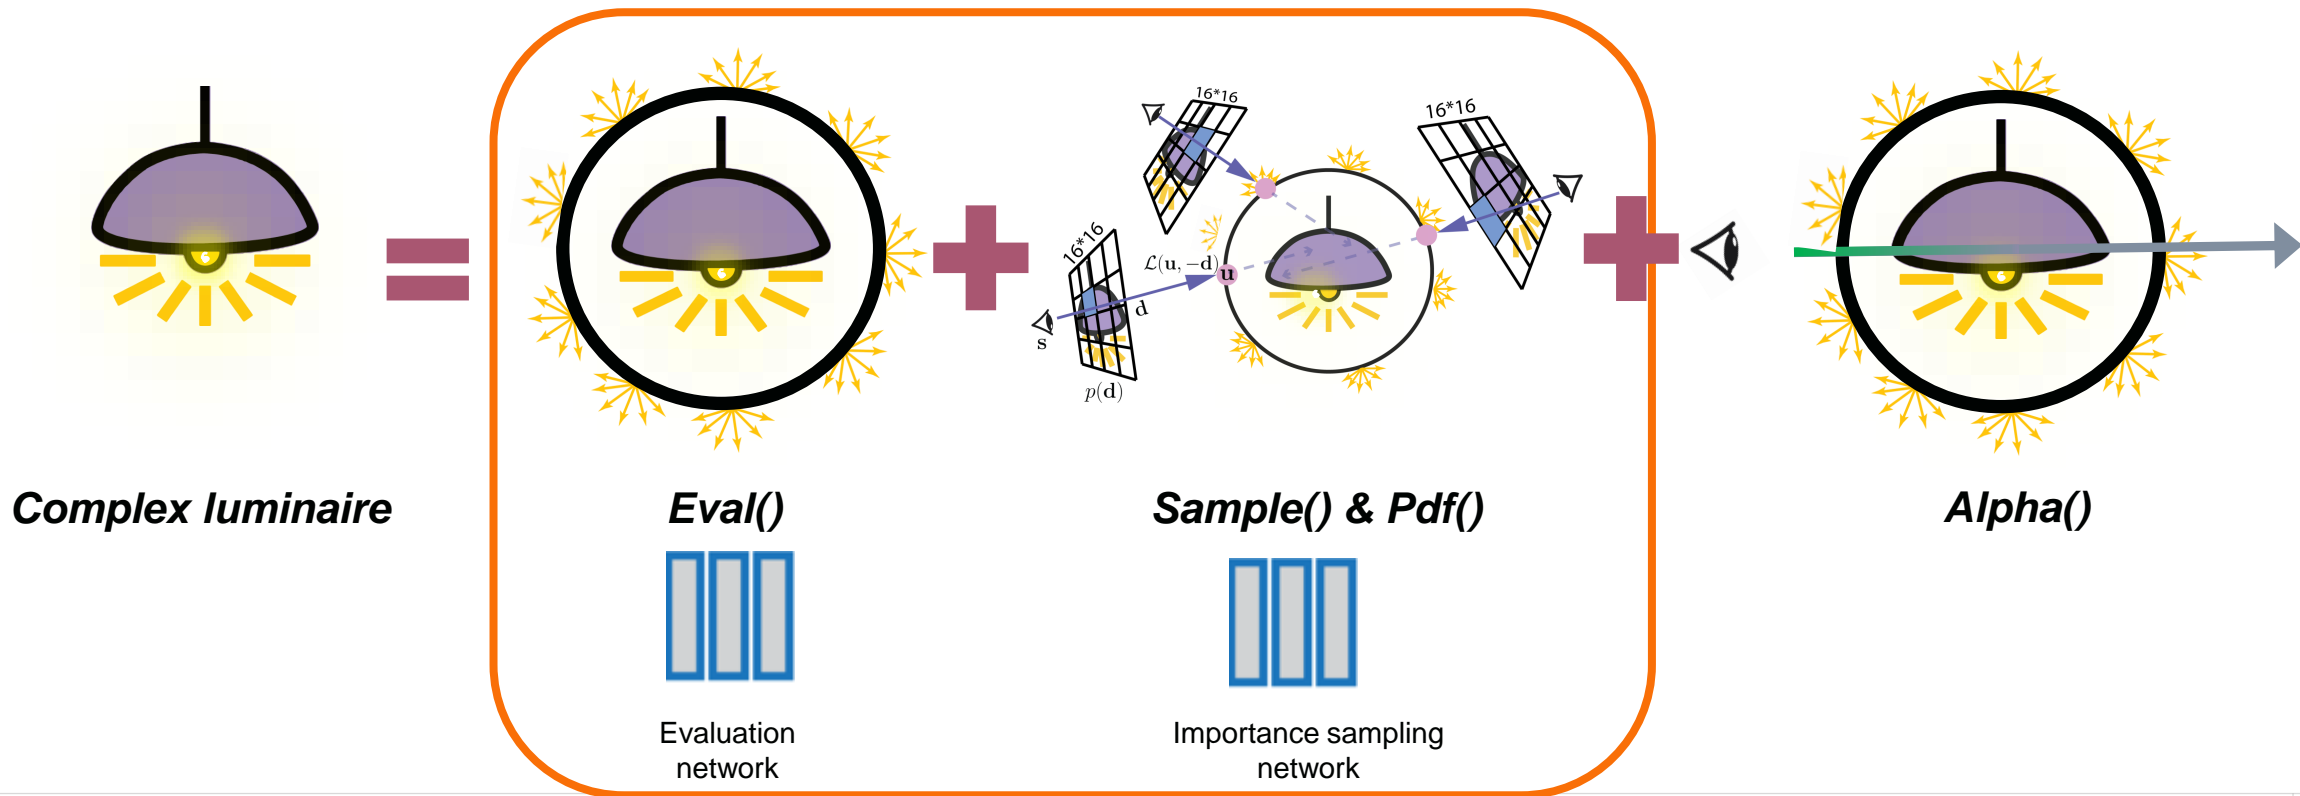

- Positional encoding
- No epoch
- 12h training
- 1.8 MB
- Preserve the energy

→ IMPORTANCE SAMPLING NETWORK

Illumination

What we need

Evaluation network

What we have

Evaluation Network

Binary mask

What we need

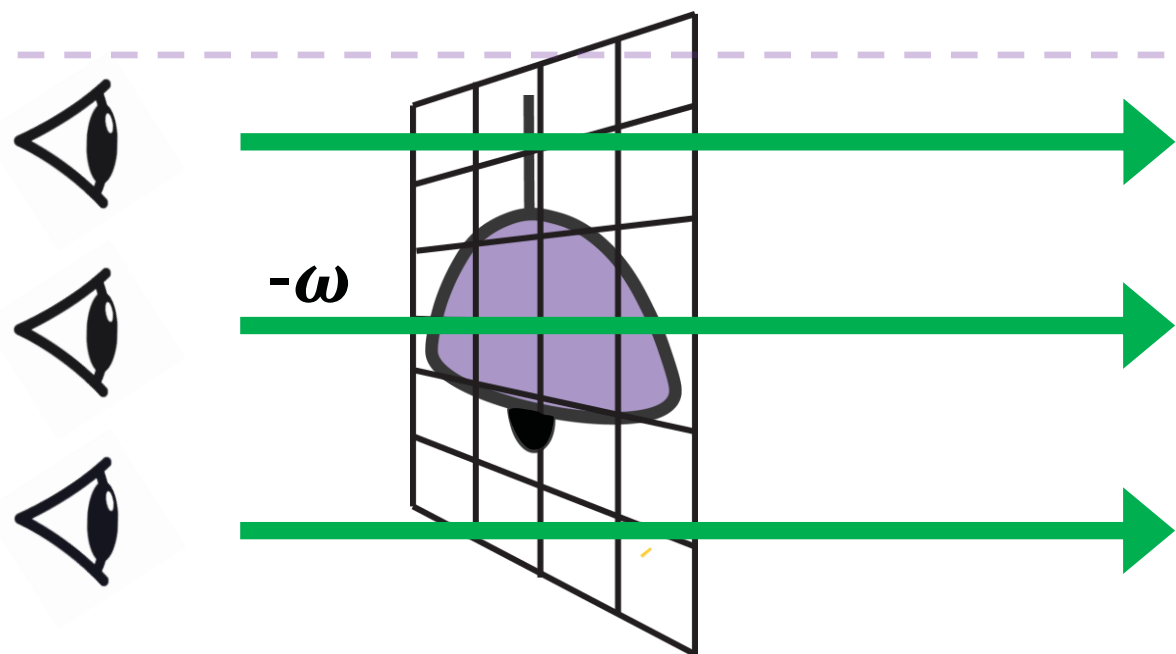

Dimmer

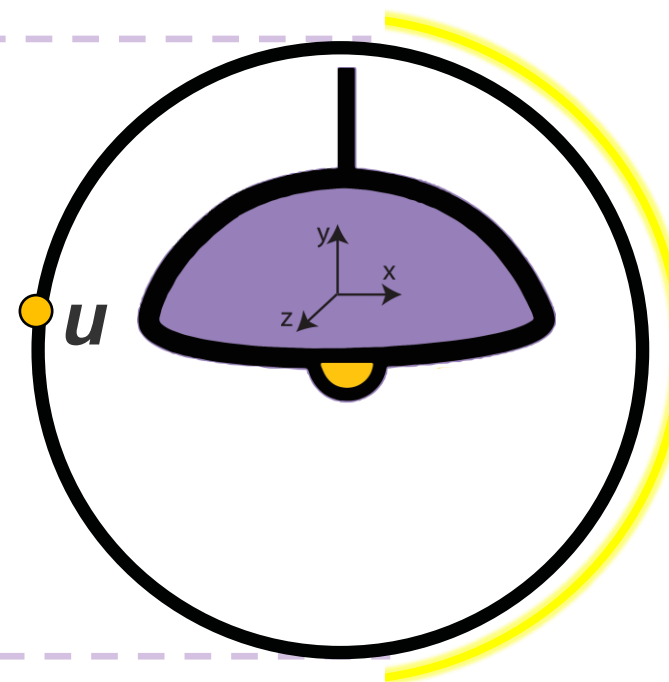

Evaluation Network+ Binary mask

Transparency field

Network structure is as same as the evaluation network

$$T(u, -\omega)$$

Bounding Geometry

Transparency network

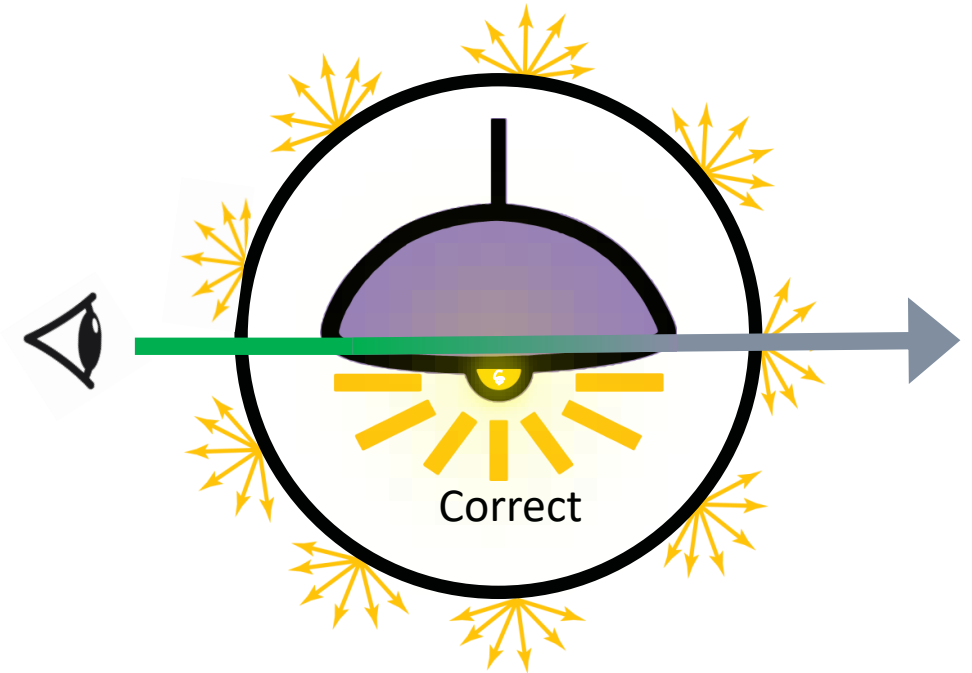

Transparency mask

What we need

Better! But the metal is black

Evaluation Network + Transparency mask

What we need

Add metal geometry (very simple)

What we finally get

RESULTS

TYPICAL COMPLEX LUMINAIRES

CAUSTIC PATHS

SIGGRAPH 2021

BDPT 1024 spp, 65.4 min.

Ours 128 spp, 4.3 min.

SPECULAR SURFACE

SIGGRAPH 2021

COMPLEX LIGHT TRANSFER

SIGGRAPH 2021

SHARP PATTERN

SIGGRAPH 2021

BDPT 1024 spp, 83.6 min.

Ours 128 spp, 3.9 min.

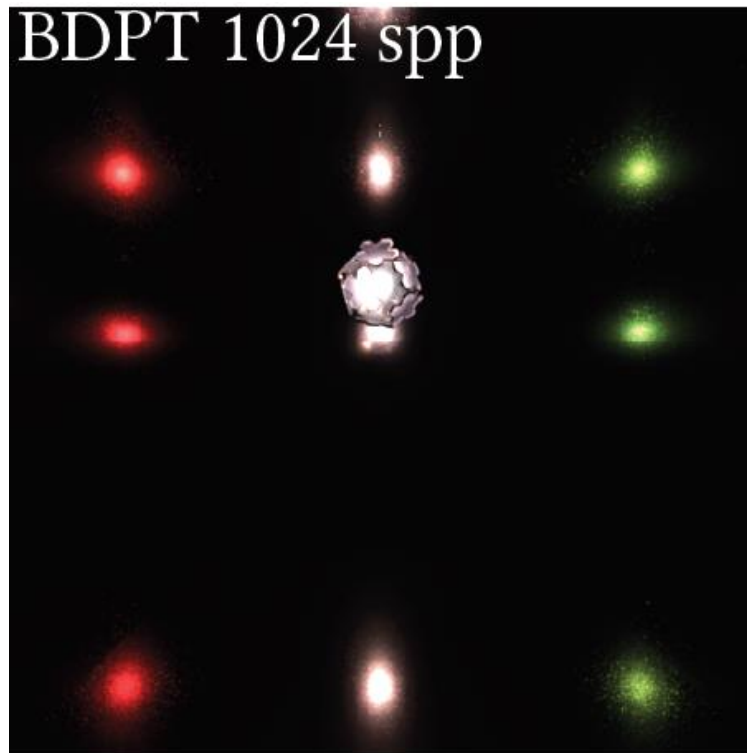

COMPLEX TIGHT BOUNDING

CORRECTNESS OF EVALUATION

CORRECTNESS OF IMPORTANCE SAMPLING

SIGGRAPH 2021

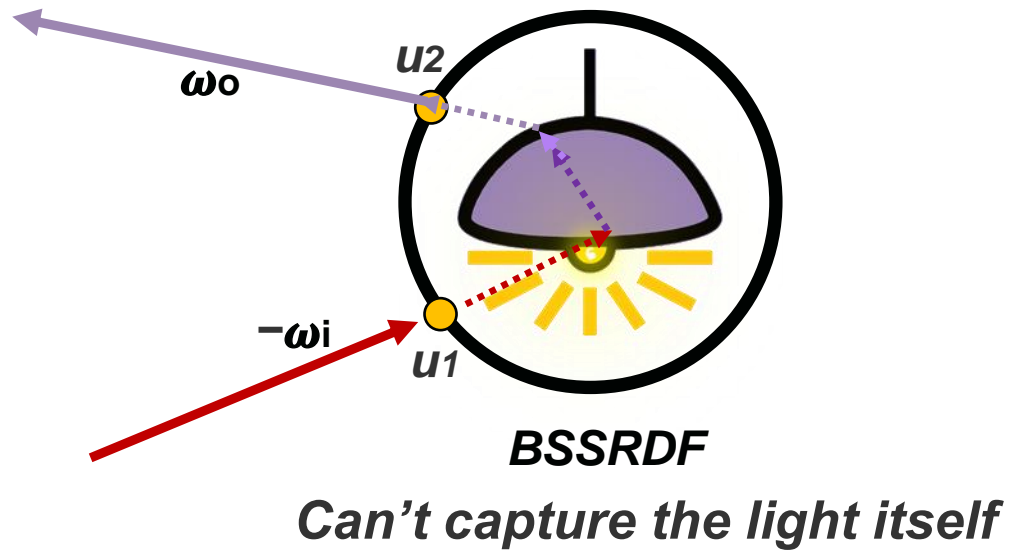

DISCUSSIONS

CONCLUSION

- *Can't capture the external light bounces reflected from the scene*

- *Blurring in the evaluation*

LIMITATIONS

SIGGRAPH 2021

- *Further bias in importance sampling*

- *Expensive synthetic training data*

Evaluation & Transparency network: 200 thousand unique images each
Importance sampling network: 1 million unique images

- *More accurate compositing of the luminaire into the scene*
- *Support for editing the luminaire parameters*

**Thank you for
your attention!**
